my goals is to become a Cybersecurity Engineer.

Generate a 6-month learning roadmap.

watsonx Agent 04:51 PM

Here's a 6-month learning roadmap for a Cybersecurity Engineer:

Month 1: Build Your Technical Fundamentals

- Learn Linux and networking fundamentals
- Familiarize yourself with security frameworks and compliance regulations
- Start learning programming languages like Python, C++, or Java

Month 2: Network Security

- Learn about network protocols and architectures
- Study network security devices like firewalls, intrusion detection systems, and virtual private networks (VPNs)
- Practice configuring and managing network security devices

Month 3: Cryptography and Access Control

- Learn about cryptography fundamentals, including encryption, decryption, and hashing
- Study access control models, including discretionary access control (DAC), mandatory access control (MAC), and role-based access control (RBAC)
- Practice implementing access control measures using tools like Active Directory or LDAP

Advanced configuration

Knowledge

Vector index

Select or create vector index

A vector index searches documents for relevant information to ground the model. Upload the files to index or select an existing index.
